Q44. How many family members, including yourself, counting adults and children, are living in your home?

| 120 | hhinc_pctfpl_0m | Household income as percent of federal poverty line | 22419 |

This variable was derived: the midpoint of the income bin indicated in Question 38 was calculated as a percent of the federal poverty line using the 2009 Health and Human Service poverty guidelines (available at http://aspe.hhs.gov/poverty/09poverty.shtml). The top income bin ($50,000 or more) was assigned a midpoint of $50,001. Household size that determined poverty guidelines was taken from Question 44.

| 121 | num19_0m | Number of family members under 19 living in house | 24922 |

Q45. Of the family members living in your house, how many are under 19?
Number under 19: _____

| 122 | num19_hi_0m | Number of family members under age 19 living in house: insurance status | 15278 |

Q46. Thinking about the family members in your house under 19 years of age, how many are currently covered by some kind of health insurance?
- All family members under 19 are covered by health insurance of some kind
- Some family members under 19 are insured, some are not
- None of the family members under 19 are insured

| 123 | cost_tot_oop_correct_0m | Total out of pocket costs for medical care, last 6 months (corrected version) | 50893 |

This is a corrected version of the variable cost_tot_oop_0m. Post-publication of Finkelstein et al 2012, it was discovered that total out of pocket costs was calculated incorrectly, failing to multiply the average monthly costs for prescriptions in the past six months (Question 24) by 6 before adding it to total medical costs (Question 25). This variable correctes that error and calculates total out of pocket costs by multiplying the response to Question 24 by 6 and adding it to the response to Question 25.
